Wharton MBA - UPenn

What do you gain to hope professionally from the Wharton MBA?

I am academically driven to gather immense knowledge about Business Management and Finance under the purview of both applied and corporate fundamentals of money. I am currently pursuing BSc in Computer Science accruing quintessential technical know-how to facilitate predictive financial modelling and to innovate in the domain of Fin-Tech. The discipline of Finance draws me for its organic prevalence. Money rules the roost and it is no surprise that professions akin to investment banking and Finance Planning enjoy ample benefits over their peers. The proposed privilege to study at the Wharton will undoubtedly trigger brilliant career advancements for me while I remain strongly committed to complete the Wharton MBA program with astute diligence and exemplary scholarly conduct.

To the interest of gaining knowledge in the business context, I have trained under Dr XXXXX, a well-respected consultant on US equity markets. Under his tutelage, I comprehended the fundamentals of global money flow, cash markets, equity and derivative markets with rudimentary learning in Sovereign Debt and Currency Institutions like the Dollar and Euro. I concur that the text-book academia is crucial and therefore, I have worked under distinguished chartered accountants in India to learn the basics of accounting & finance, taxation and litigation in the context of tax demands. While working with the firms of CA XXXXX and CA XXXXX, I received training under intelligible mentors regarding business accounting, Income and GST tax preparations and sundry other aspects of financial auditing.

I am currently pursuing BSc in Computer Science from the XXXXXX (www.xxxxx.ac.in), due completion in July 2021. Prior to this I concluded my school studies, both higher and senior secondary; summa cum laude scoring 92% and 93% marks respectively. Soon after school, I was selected at the XXXXX in the B Tech Program. MIT is one of the best non IIT engineering colleges in India and I prepared hard to get a slot in the college through an entrance examination. However, due to a physical ailment, I had to drop out of VIT after 1st year and soon after I defeated the illness, I started with my BSc Course at PVKK.

Finance and Technology are the two pillars of economy sans which the growth ceases to exist. I have organic interest in both domains and to that aspiration; I have profusely researched and studied the neo modern data intelligence technologies such as Machine Learning and Big data Algorithms. I aspire to develop protean applications in the realm of applied finance. Equity and currency markets, Emerging Markets and Crypto-currencies are my areas of interest. 'Quant' is not a new methodology in the context of equities and bond markets often, even misused in the past. However, with the advent of fully developed AI Structures and expansive research in the field, the data capabilities have undergone a paradigm shift within the ethical boundaries. I have no doubts that I will deliver stupendous results in optimisation of prediction analysis and hedge fund management through my prototypical research. A valid curriculum like the Wharton MBA program is critical to the success of it.

Post concluding my MBA, I will be seeking further research opportunities through a PhD program while participating in the investment vertical of finance as a consulting professional or a teacher. My long term research interests include developing original innovation to resolve micro finance issues in a co-operative agrarian economy such as India and Sri Lanka and to develop financial modelling techniques deploying cash market nuances to the crypto currencies. Higher education at Wharton will enable me to develop a robust learning base and a privilege that I will honour with utmost sincerity.
